

New kids & family area

Tornado Land

Tornado Land is the new children's and family area of Water World

It consists of eight new slides that arrive, all of them, at the same reception pool. Of the 8 slides, 4 are for children, two for slightly larger children and two for family members (children can go alone in individual floats or accompanied by their parents in double floats).

The new area is designed and built by Canadian manufacturer Proslide Technologies, the world's leading water attraction manufacturer.

One of the characteristics of "Tornado Land" is that it incorporates a Kids Double Tornado Wave; the first slide of these characteristics that Proslide has manufactured worldwide; it is a replica, in smaller size, of the great attraction that Water World will incorporate the 2025 season, which will be the second phase of the expansion of the Water World water park.
